Introduction

Please click on the above video for an introduction from Kathie Krause, MSN, RN, NNP-BC, NEA-BC, Chief Nursing Officer, Monroe Carell Jr. Children’s Hospital at Vanderbilt

Monroe Carell Jr. Children’s Hospital at Vanderbilt 2020 certified nurses
The voice and actions of the bedside nurse at Monroe Carell Jr. Children’s Hospital at Vanderbilt speak loudly when it comes to getting better outcomes for patients and families. OR nurse Jason Linsley, BSN, RN, CNOR, proposed a simple solution that resulted in significantly reduced surgical site infection rates.

In September 2019, Linsley learned of increased cardiothoracic surgical site infections at the interprofessional hospital-wide surgical Mortality, Morbidity and Improvement (MM&I) conference. He took it personally.

Linsley began brainstorming for solutions — thinking of any possible variable that might contribute to the increase in cardiothoracic surgical site infections. He recalled that his surgical patients receive a CHG (chlorhexidine) bath the night before surgery. Then he remembered that the hospital where he previously worked had a protocol that cardiothoracic patients receive a CHG bath right before surgery.

Could that work here?

Linsley's suggestion, voiced at the hospital-wide MM&I meeting, resulted in implementation of a new CHG bath protocol. Working with his colleagues, Jason helped develop the process to ensure that patients would receive a CHG bath in the holding room before surgery.

Structural Empowerment
Clinical nurse's engagement leads to reduced surgical site infections
Cardiothoracic surgical-site infection rates dropped from 0.13% pre-intervention in August 2019 to under 0.04% post-intervention in January through May 2020.

“We take our responsibility and our job really seriously for these kids, because we want to make everything as safe as possible and as safe as possible.” — Jason Linsley, BSN, RN, CNOR

“It all starts with our culture at Monroe Carell Jr. Children’s Hospital at Vanderbilt. It really empowers the nursing staff to speak up and share their ideas to improve outcomes and improve the quality of care we provide.” — Leighann Chadwell, MSN, RN, NE-BC, Nurse Manager for the Holding Room and Post Anesthesia Care Unit

“There was a call to act and everyone was willing to take up the appropriate actions and collaborate together to push this initiative off the ground, to keep our patients at the center of how we provide that care.” — Lauren Boston, MSN, RN, CPNP-PC, nursing education specialist

In 2019, pediatric ambulatory nurses at Monroe Carell Jr. Children’s Hospital at Vanderbilt had a problem: it was difficult to locate critical care information for Complex Care patients in a timely manner, including sick day management, tracheostomy size and home ventilator settings. This created nursing productivity challenges as well as a potential for patient harm due to delayed care.

The ambulatory nurses elevated their concerns to Kathy Moss, MSN, MBA, RN, NEA-BC, Administrative Director, Pediatric Ambulatory Nursing, Wound Ostomy, Respiratory Care and Specialty Projects; and Barron Patterson, MD, Vice Chair for Ambulatory Services, Department of Pediatrics, during their bimonthly safety rounds.

Moss saw the opportunity and developed a proposal for a quality improvement project. Working with the ambulatory nurses, an electronic standardized care plan was developed and implemented that includes patient goals and outlines the needs for nutrition, equipment, supplies, therapies and sick day management strategies for the Complex Care patients.

In January 2020, the Care plan was created in the electronic medical record for such patients. The plan is personalized for each patient and easily accessible by the care team. Care instructions can easily be shared with patients and families via a care summary. It was all made possible by a combination of staff nurses who were empowered to drive improvements, and Moss, their nurse leader who championed the effort and worked with the interdisciplinary team to get results.

“These Complex Care patients often have home health nursing needs that require plans and information to be kept concisely and in one place. Now, we can find the information quickly and are able to keep it updated and save time and delays in care. It was a multidisciplinary, collaborative effort of the Complex Care nurses, physicians and advanced practice nurses working together.” — Kathy Moss, MSN, MBA, RN, NEA-BC, Administrative Director, Pediatric Ambulatory Nursing, Wound Ostomy, Respiratory Care and Specialty Projects
Between 2015 and 2018, Monroe Carell Jr. Children’s Hospital at Vanderbilt experienced a concerning trend: a 64% increase in primary Behavioral Health admissions. Not only did the total Behavioral Health admissions increase, but the percentage of patients presenting to our Pediatric Emergency Department with aggression increased. This rapid increase in the volume of patients with aggression presented numerous challenges, including concern for the safety of patients and the staff caring for them.

Clinical nurses in the Pediatric Emergency Department (PED) recognized the need for a standardized approach to managing patients who presented with aggression. In the fall of 2018, the PED nurses collaborated with an interprofessional team to implement the Broset Violence Checklist, an evidence-based tool for identifying patients at risk for aggression. The Broset Violence Checklist was coupled with pharmacological and non-pharmacological strategies, such as the My Health Passport, to intervene with patients at risk for aggression before they injured themselves or the staff caring for them.

A PED nurse, Lindsey Davis, championed the use of the My Health Passport (MHP) in the PED. The MHP is a non-pharmacological tool that helps the healthcare team learn how the patient communicates, identify known triggers and better understand how to de-escalate aggressive patients. Following the success of the Broset Violence Checklist and My Health Passport in the PED, these tools were implemented in the inpatient units in the spring of 2019.

The Broset Violence Checklist, My Health Passport and several other improvement strategies focused on the care of the Behavioral Health patients have led to a 92% decrease in staff injuries.

“For the mental health population, the emergency department can be a disruption to their routines and potentially exacerbate emotions and behaviors. The information provided in the My Health Passport can help us identify and intervene in situations before patients become aggressive. I am proud of the work VUMC has done to improve resources available for

92% reduction in staff injuries from patient behavior events
35% reduction in length of stay for admitted behavioral health patients
35% reduction in behavioral restraint usage
14% decrease in admissions of behavioral health patients from the PED
an evidence-based tool for identifying patients at risk for aggression. The Broset Violence Checklist

our Behavioral Health population. When properly utilized, the My Health Passport can help keep our patients and team members safe.” — Lindsey Davis, BSN, RN, Registered Nurse 3, Pediatric Emergency Department

“A trained staff member is often able to verbally de-escalate effectively and reduce the need for medications and physical restraints. We love our mental health techs and specialists, and their training helps ensure the My Health Passports are completed. The Broset checklist provides a more objective score and is really nice for nurses who are less familiar with the Behavioral Health population.” — Carolyn Von Lunen, BSN, RN, CPN, Registered Nurse 4, Pediatric Surgical, Trauma, Adolescent Medicine (PSTAM).
At Monroe Carell Jr. Children’s Hospital at Vanderbilt, the post-anesthesia care unit, or PACU, is a hive of activity as patients are awakened from their operating room procedures. Given that each patient’s awakening is meant to be gentle, the general noise level in the PACU prompted concern from staff nurse Savannah Ramsey, BSN, RN.

“A survey of the literature indicates not only that higher noise levels (>45 decibels) contribute to medical errors, but that PACU patients require more analgesia when noise levels are higher,” Ramsey said. “Noise also tends to raise stress levels — not optimal for patients, nor, for that matter, for healthcare workers. I thought there might be an opportunity to bring down the sound level without disrupting unit operations.”

With the help of a small group of colleagues and
some strategically placed sound-level measuring devices (noise dosimeters), Ramsey studied the effectiveness of a set of measures intended to quiet down the PACU. Interventions included installation of noise dampening curtains (HUSH® curtains) around selected patient bays; nurse education concerning the appropriate adjustment of alarm parameters for each new patient; lowering the volume of certain audible automated team reminders; and a visual cue — a traffic-signal-type display triggered by a built-in noise-level meter — when staff conversations got too loud.

Pre- and post-intervention decibel levels were measured in four areas: on the lapel of the float medication nurse, at the nurses’ station, and in PACU bays #7 and #14. There was no reduction in noise level pre- to post- on the lapel of the float medication nurse (p=0.916). Noise measurements decreased significantly pre- to post- at the nurses’ station (p=0.016), in PACU bay #14 (p=0.016) and most significantly in PACU bay #7 (p=0.005). The bay with the highest level of noise reduction was surrounded by a HUSH® curtain — a product specifically made to reduce noise. The success in noise reduction with the use of HUSH® curtains has led to the purchase of these curtains for additional PACU bays and the opportunity to conduct a replication study.

“Based on weeks of sound-level measurement pre- and post-intervention, the resulting reduction in noise levels was quantifiable and statistically significant for each area measured except on the lapel of the floating medication nurse,” Ramsey said, “and large enough to warrant leadership approval to roll these interventions out throughout the PACU.”

The study was published in recent issue of *The Empowered Nurse*, a peer-reviewed journal published at Vanderbilt University Medical Center (VUMC) devoted to VUMC nursing research. Joining Ramsey in the study were Elizabeth Card, MSN, RN, APRN, FNP-BC, CPAN, CCRP, FASPAN; Summer Fitts, BSN, RN, CPAN; and Leighann Chadwell, MSN, RN, NE-BC.

For weeks the Nashville community rallied around healthcare staff as they mobilized to prepare to care for COVID-19 patients.

While the gratitude for the staff has been far reaching, many within the walls of Vanderbilt University Medical Center have reached out to each other to offer positive reinforcement and morale-boosting gestures.

Diane Holloway, a 20-year registered nurse in the Pediatric Intensive Care Unit (PICU) at Monroe Carell Jr. Children’s Hospital at Vanderbilt, is one of those people. Staff of the PICU wanted to show support for its sister unit, the Medical Intensive Care Unit (MICU) in Vanderbilt University Adult Hospital. Within hours, Holloway was receiving donations and ideas.

“It came together so easily and quickly,” she said. “It really helped everyone focus on something positive. We were all excited about supporting them, encouraging them and lifting them up.”

Holloway’s efforts resulted in a Keurig coffeemaker along with two full carts and four bins of snacks and goodies for the MICU team.

The donation was delivered on Thursday, April 9, to a very surprised team in MICU.

Devin Bunch, MMHC, BSN, RN, manager of the MICU, said the timing couldn’t have been better.

“As distant as our two units are, this really shows just how connected we really are during times of crisis,” said Bunch. “They knew we needed a little extra thoughtfulness. With all of the stressors that our nurses are experiencing right now, to have our peers providing this level of support is a real comfort. It was an overwhelming amount of support.”
Children and their families who come to Monroe Carell Jr. Children’s Hospital at Vanderbilt for their care are used to seeing the friendly faces and smiles of staff, nurses and doctors.

When COVID-19 cases began rising in Nashville, masking became a regular part of life across Vanderbilt University Medical Center and Children’s Hospital as one of several public health safety measures to protect employees and patients from potential COVID-19 exposure.

Children’s Hospital decided to get creative to ensure that the 1,700 children and families who visit the hospital and clinics each day can see that the same friendly faces they’ve always known still exist behind the masks.

And so was born the Button Project, spearheaded by the Children’s Hospital Family Resource Center (FRC).

Working with the VUMC Badge Office and the clinical staff, the Family Resource Center identified teams across Children’s Hospital that would like photo buttons of their faces to wear visibly on their shirts for patients to see.

The goal of the Button Project is to eliminate or reduce a level of fear and anxiety for patients who find comfort in seeing the smiling faces of their providers and healthcare team members. With the new safety policies around COVID-19, such as mask wearing, this is a strategy to accomplish that goal.

“Masks can be scary for some children depending on their developmental stage. Our goal is to ensure that patients and families feel safe during their stay, so the staff decided to find a creative way to wear colorful, fun masks and personalized buttons so everyone could see their faces. I am so proud of them. We have a great team of professional nurses who are continually seeking out opportunities to help children and their families.” — Barb Shultz, MSN, RN, NEA-BC, Administrative Director of Surgical Services.
Just in case anyone needed a reminder: Vandy rocks! And so do the staff, nurses and doctors.

From the elevator lobby in West Garage or walking across the South Garage Skybridge into Monroe Carell Jr. Children’s Hospital at Vanderbilt, those reminders dot paths along the way.

These colorfully painted inspirational inscriptions cover each rock. Painted rocks are also sometimes called kindness stones, meant to spread joy and inspiration to those who encounter them. Maybe especially during the COVID-19 pandemic, kindness counts.

The stones were created and placed around the Vanderbilt University Medical Center campus by nurses in the Radiology Recovery Unit at Children’s Hospital. The idea came from Michele Riley, RN, and Stevie Crossland, BSN, RN. They had help from friends Heather Grimes, RN, and Sarah Beth Gray, a Child Life Specialist.

Their hope is to share joy with staff as they arrive to work and let them know everyone is in this together.

For Riley, one rock, in particular, has a lot of meaning: “hugs,” it says.

“We wanted to do something to lift everyone’s spirit during this stressful time. Anybody that knows me well, knows I’m a big hugger,” Riley said. “I usually hug staff and patients many times every day. This season of social distancing is especially difficult for me. This is my way of ‘hugging’ our amazing Vandy family and our sweet patients.”

The group grabbed the rocks from their own backyards to bring kindness to the Vanderbilt community.

“Our wonderful Radiology Recovery unit at Vanderbilt Children’s Hospital loves creating art to fill our patient care areas with welcoming and sensory-friendly decor,” Crossland said. “I thought the rock painting would be a great way to share light and love to our staff members during this dark moment. My fellow nurses were wonderful and eager to help me with this project. I’m so glad everyone is enjoying our Vandy rocks.”

Vanderbilt Nurses Rock, Literally
Kudos Wall Emphasizes Kindness

“Kind words can be short and easy to speak, but their echoes are truly endless.”

Those words, spoken by Mother Teresa, couldn’t ring any more true now.

In Monroe Carell Jr. Children’s Hospital at Vanderbilt Post Anesthesia Care Unit (PACU), two nurses, Laura Durchsprung, CRNA, and Cory Smeltzer, BSN, RN, took that idea to a new level by creating a Kudos Wall. The word kudos is of Greek origin and means “praise or renown.”

With creative support from Child Life Services, Durchsprung and Smeltzer invited anyone who works in perioperative and procedural services for Children’s Hospital to write a note of thanks and appreciation to others with hopes to brighten someone’s day, encourage others and help people stay positive.

“I knew there was a definite opportunity to boost the morale on the third floor as COVID-19 started to consume all of our practices. We decided that the opportunity to ‘throw kindness like confetti’ would be an enjoyable way for staff to interact with and encourage one another through the stresses of this season in the healthcare system,” Smeltzer said.

“How nice it is to feel seen through such a challenging time, not only in our hospital but in the world. It has been inspiring to see the uplifting comments between staff members and from some of our patients. We are truly thankful for the opportunity to weather this storm with such kind co-workers and friends!”

Each day, the Kudos Wall is a little fuller as people “throw kindness like confetti.” Messages include: “You are appreciated, you are prayed over, and you are a hero. Thank you for what you are doing.” They also remind people to “… just pause and remind yourself of the blessings in life.”

“The purpose of creating the encouragement wall was to bring a little cheer to the entire perioperative area. This is a stressful time, full of unknowns, but having a way to honor our co-workers helps us to refocus our attention and remember why we became nurses in the first place. It has truly been a joy to watch people write notes of thankfulness and encouragement to each other. It is a great reminder that we have an unbelievably strong team and that together is better,” Durchsprung said.

Smeltzer added, “The comment that stands out to me is, ‘We are so much more than co-workers, WE are FAMILY.’ This quote truly exemplifies the Children’s Hospital Periop team, not only today as we face unprecedented times, but also every day. Our culture is one of caring for, supporting and encouraging each other – just like a family.”
Awards and Recognition
Celebrating Excellence in Nursing at Monroe Carell Jr. Children’s Hospital at Vanderbilt

2019-2020 Nursing Honors:

**Annette Pacetti, MSN, APRN, NNP-BC, NICU, VUMC**
Award: Jerita Payne Advanced Practice Nurse of the Year

**Ashlyn Miniat, BSN, RN, TNCC, PICU**
Special Recognition: The DAISY Award

**Crystal Bonjniewicz, RN, CLC, NICU**
Special Recognition: The DAISY Award

**Dee Butler BSN, RN, CLC, NICU**
Special Recognition: March of Dimes Nurse of the Year

**Elizabeth Haley Vance, DNP, APRN, CPNP-AC, Pediatric Neurosurgery**
Award: American Academy of Pediatrics & Society of Neurological Surgeons’ Kenneth Shulman Award, presented at the 2019 International Pediatric Neurosurgery Meeting

**Heather Jackson, PhD, APRN, FNP-BC, NEA-BC**
Invited to speak and participate as faculty in the Tennessee Pain Society Annual Meeting and Scientific Sessions: Complementary Therapies in Acute and Chronic Pain Management & Online APP Workshop

**Jennifer Dindo, BSN, RN, CPEN, Comprehensive Regional Pediatric Center**
Appointment: Board of Directors, Children’s Emergency Care Alliance Tennessee

**Jordan Smith, BSN, RN, Pediatric Endocrinology**
Special Recognition: The DAISY Award

**Kaitlyn Henderson, BSN, RN, TNCC, PICU**
Special Recognition: The DAISY Award

**Kate Copeland, MSN, RN, CPN, NEA-BC, Emergency Services**
Award: Joseph Weinberg Leadership Award, presented at the 2019 Children’s Emergency Care Alliance Annual Conference

**Kate Copeland, MSN, RN, CPN, NEA-BC, Emergency Services**
Professional Activity: Board of Directors, Immediate Past President, Children’s Emergency Care Alliance Tennessee

**Kathie Krause, MSN, RN, NNP-BC, NEA-BC, Chief Nursing Officer**
Appointment: Governor Lee’s Tennessee Health Care Modernization Task Force

**Katie Koss, MSN, RN-BC, NEA-BC, Assistant Director, Children’s Hospital Off-site Clinics**
Appointment: ANCC Pediatric Nursing Standard Setting Workgroup

*Marlee Crankshaw, DNP, RN, CNML, Alumni Award: Clinical Achievement in Nursing Vanderbilt University School of Nursing*
Kimberly MacKeil-White, MSN, RN, CPEN, NPD-BC, Nursing Education. Professional Activity: Emergency Nurses Association Pediatric State Chair

Lee Blair, MSN, RN, CEN, EMT-P IC, Comprehensive Regional Pediatric Center. Professional Activity: Vice-Chair for the Tennessee Committee on Pediatric Emergency Care

Marlee Crankshaw, DNP, RN, CNML, Neonatal Services. Alumni Award: Clinical Achievement in Nursing Vanderbilt University School of Nursing

Marlee Crankshaw, DNP, RN, CNML, Neonatal Services. VUMC Award: Adrienne Ames Transformational Nursing Leader

Mary Hannah Baker, BSN, RN, PCARD. Special Recognition: The DAISY Award

Neonatal Intensive Care Unit (NICU) Interdisciplinary Mock Code Team [Jordan Bennett, BSN, RN; Caitlin Pugh, MSN, RN, RNC-NIC; Maria Gillam-Krakauer (MD); Christa Sala (RT); Elizabeth Sauvageot, BSN, RN, CCRN; Meghan Kimbro, RN; Kara Fowler, RN]. VUMC Award: Elevate Team Award

Pediatric Cardiac Intensive Care Unit (PCICU). Award: American Association of Critical Care Nurses Beacon Award, Bronze Level

Sara Anderson, MSN, RN, Float Pool. Special Recognition: The DAISY Award

Sarah Goodsell, BSN, RN, NICU. Special Recognition: The DAISY Award

Sarah Sexton Walters, MSN, APRN, CPNP-AC, Pediatric Otolaryngology. Appointment: Board of Directors of HOSA, Inc., HOSA-Future Health Professionals

Sarah Tolan, BSN, RN, PCICU. Special Recognition: The DAISY Award

Stephanie Abbu, DNP, RN, CNML, NICU, 2020 Tennessee Nurses Foundation (TNF) Scholarly Writing Contest winner

Stephanie Abbu, DNP, RN, CNML, NICU, Named as a contributing editor for Neonatal Network, a nursing peer-reviewed journal

Stephanie Abbu, DNP, RN, CNML, NICU, Professional Activity: Awarded Tennessee Nurses Association District 3 Vice-President

Stephanie Abbu, DNP, RN, CNML, NICU, VUMC Award: Rebecca Clark Culpepper Education and Mentorship

Stevie Crossland, BSN, RN, Radiology Recovery. VUMC Award: Rosamond Gabrielson Staff Nurse of the Year

Tamera Hawkins, RN, LCCE, NICU. VUMC Award: Rosamond Gabrielson Staff Nurse of the Year

Tamera Hawkins, RN, LCCE, NICU. Special Recognition: The DAISY Award
2019 – 2020 Disseminations:

Excellence in Advanced Practice
NP Clinical Advancement Program promotes professional growth and development

Advanced Practice Registered Nurses (APRNs) at Monroe Carell Jr. Children’s Hospital at Vanderbilt have a new clinical advancement program designed to recognize non-faculty nurse practitioners who have demonstrated exemplary performance in research and knowledge translation, education/teaching and clinical practice.

In 2019, a Clinical Advancement Task Force was created to design and pilot a program that gives APRNs the opportunity to optimize the advanced practice role, improve job satisfaction and reward professional engagement and accomplishment. The Pediatric Critical Care Medicine (PCCU) team, a group of highly specialized and motivated Nurse Practitioners, was selected to participate in the pilot program. The PCCU APRNs had various levels of clinical experience and involvement in quality improvement, research and their professional organizations. Three APRNs from the PCCU successfully advanced during the pilot. Participants demonstrated increased job satisfaction following implementation of this program, especially in the domains of intraprofessional partnerships, autonomy and professional growth.

In July 2020, the program was launched throughout Children’s Hospital and opened to all eligible APRNs. Four additional APRNs successfully advanced during the second half of 2020. The clinical advancement program gives experienced APRNs growth opportunity and serves as a recruitment and retention strategy for these nursing professionals.

“Being able to recognize APRNs who have devoted time, energy and intellect to nursing practice rewards me as the leader and shows MCJCHV’s commitment to ongoing professional development.”
– Michelle Terrell, DNP, APRN, CPNP-PC/AC Director of Advanced Practice

“The APRN clinical advancement program is a gratifying process. This program allowed me to reflect on my career and successes. Having a committee of esteemed colleagues review my accomplishments and deciding in favor of my clinical advancement was a rewarding experience. I have since encouraged several colleagues to complete the process for clinical advancement. I am thankful APRNs have this opportunity for growth.”
– Catrina Bledsoe, MSN, APRN, CPNP-AC, Pediatric Cardiac Surgery
