

COVID-19

A new coronavirus, first identified in December 2019, has caused an outbreak of respiratory illness that the World Health Organization named COVID-19 (coronavirus).

The virus usually spreads from **close person-to-person contact** through respiratory droplets from coughing and sneezing.

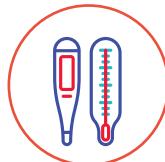

Symptoms may develop within 14 days of exposure to the illness.

SYMPTOMS OF COVID-19 INCLUDE:

New cough

Fever

New shortness of breath

In rare cases, it can lead to severe respiratory problems, kidney failure or death.

WHEN TO SEEK MEDICAL CARE FOR COVID-19

If you are asymptomatic (exhibiting no symptoms) you **do not need** to seek medical care **or testing for COVID-19**.

If you have a fever, cough and shortness of breath or flu-like illness, please call the Vanderbilt Health COVID-19 Hotline (888-312-0847) or go to one of the VUMC assessment sites listed at vumc.org/coronavirus.

THE BEST WAY TO PROTECT YOURSELF

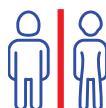

Wash your hands frequently and thoroughly using soap and water for at least 20 seconds. Use alcohol-based hand sanitizer if soap and water aren't available.

Cough or sneeze into a tissue or flexed elbow, then throw the tissue in the trash.

Avoid touching your eyes, nose or mouth with unwashed hands.

Avoid close contact with people who are sick, sneezing or coughing.

Stay home when you are sick.

Clean and disinfect surfaces and objects people frequently touch.

Only wear a face mask if you have respiratory symptoms or are caring for someone with respiratory symptoms.
