

# Newly Approved VUMC “All Purpose” Cleaning Product

In collaborative efforts to expand our cleaning and disinfection supplies, VUMC has approved a generic cleaning and disinfection spray produced locally in Lynchburg, TN. This product is composed of 80% alcohol and can be used on a variety of surfaces and medical equipment.

- This “All Purpose Cleaner” has been formulated with 80% alcohol as its main ingredient and will kill COVID-19 as well as most viruses, bacteria and fungi. Alcohol based products are broad spectrum bactericides, fungicides and viricides.
- This product would be acceptable for cleaning surfaces where the manufacture has recommended alcohol-based cleaning products. Please refer to the manufacturer’s website for how to appropriately clean items (duration of “Kill time” or wet contact time) so you do not damage or void your equipment warranty (Ex. Stethoscopes, I-Pads, I-Phones, wheelchairs, stretchers, walkers).
- Spray mist to cover the entire surface and let air dry. Note that alcohol is flammable, so proper storage is important. Alcohol can be drying to surfaces plastic/vinyl.
- This product would not be appropriate for cleaning or disinfection of equipment or surfaces contaminated by *Clostridioides difficile* or *Mycobacterium tuberculosis*.
- This product can be used as a hand sanitizer if no other hand sanitizer is available since its formulation is greater than 60 % alcohol. Please keep in mind it will be drying/irritating as it is not formulated with emollients to keep hands/skin protected.
