Etiology of Persistent Microalbuminuria in Nigeria

The aims of this study are: 1) To determine the rates of albuminuria and contributing factors in persons living with HIV and compare this to age- and sex-matched HIV-negative adults presenting for routine care at the Aminu Kano Teaching Hospital in Kano, Nigeria; 2) To determine the role that hypertension and other comorbid medical conditions (e.g. sickle cell trait/disease, immune activation/ inflammation from parasitic infestations and tuberculosis, exposure to potentially nephrotoxic antiretrovirals), have on the risk for development of albuminuria.
