- 4:45: Closing remarks, adjourn

Saturday April 25th 9:00-12:00pm

Deep dive into how neurologic, cardiopulmonary, upper airway, and gastrointestinal anomalies can impact pediatric feeding and swallowing; the more you know can improve feeding outcomes for your patient.

The focus of this session is to improve the clinician's understanding of how these systems interact with feeding/swallowing and to review the current evidence to help guide the clinician in feeding assessment and treatment. Pediatric feeding/swallowing intervention often involves a multidisciplinary team, and this session provides an overview of how important interdisciplinary collaboration is for these patients.

- 9:00-10:30 Laura Brooks, M.Ed. CCC-SLP BCS-S| Clinical Specialist (1.5 hours)
- 10:30-10:45 Break
- 10:45- 12:00 Laura Brooks, M.Ed. CCC-SLP BCS-S| Clinical Specialist (1.25 hours)
