*All air operations provided by Air Methods Corporation.
All medical services provided
by Vanderbilt University Medical Center.*

YOU HAVE A CHOICE. ASK FOR VANDERBILT LIFEFLIGHT.

- Vanderbilt LifeFlight flies a Pilatus PC-12 with one pilot, two medical crew members, and room for two family members.
- The Pilatus PC-12 has the ability to transport patients 900 miles non-stop. It cruises at 322 miles per hour and maintains a pressurized cabin to 30,000 feet.

ONE CALL. ANYWHERE, ANYTIME.

- With one phone call, the entire flight is coordinated, including air and ground transportation. Quotes are all inclusive.
- The medical crew are trained to transport neonatal, pediatric, and adult patients, as well as high risk obstetrics, multisystem trauma, burn patients, and organ transplant recipients.
- The dedicated aircraft is equipped with a multi-function ventilator, cardiac monitors, medical oxygen, two units of blood, compressed medical air, IV pumps, and an array of medications. Neonatal transport team can provide Nitric Oxide during transport.
- Specially trained to transport patients with a ventricular assist device. A Vanderbilt cardiac perfusionist is available 24/7 to accompany the flight team for all VAD transports. This service is available for transports to or from any facility.
- LifeFlight continually monitors the flight path using satellite tracking and flight phones, and keeps in constant communication with the flight team, referring facility, accepting facility and patient's family.
- LifeFlight has iSTAT blood analysis on every flight.
- LifeFlight has intra-aortic balloon pump (IABP) capability. LifeFlight will provide its own pump.
- Our medical crew offers world class medical care. Initial and recurrent training exceeds industry standards.
- LifeFlight staff includes nurse practitioners, physicians, nurses, and paramedics.
- LifeFlight transports all patient types including hospice and rehab.

LifeFlight will transport to ANY appropriate hospital.
