RESEARCH

RESEARCH INTERESTS

My interests form two interdigitated lines of research. 1) I am interested in translational research on personality disorders and integrating treatment approaches to improve clinical care for individuals with personality disorders. 2) I am attempting to further refine our understanding of phenotypes of personality pathology, using machine learning approaches, such as factor mixture modeling and other latent classification techniques, to address this issue. Cutting across my work, I am currently utilizing attachment theory, impulsivity, trauma, and addiction research, and ecological momentary assessment to better understand personality and its correlates.

I run the Treatment and Assessment of Personality Pathology (TAPP) Lab at Fairleigh Dickinson University. Find out more about our work here: www.tapplab.org.
