

# EVERYONE DIES OF CARDIAC ARREST: IMPROVING ACCURACY OF DEATH CERTIFICATION

Adele Lewis, MD  
State Chief Medical Examiner

# Why do we need this presentation?

- Nationwide, around 50% of death certificates contain a major error affecting ICD-10 coding of diseases or disorders
  - Of these, around 60% have incorrect or missing information for the underlying cause of death
- Recent survey of Tennessee physicians:
  - Nearly half (46%) of respondents indicated they had never received formal training on death certification
  - Nearly 90% of respondents indicated a need for training in the death certification process in Tennessee

# Accuracy and Timeliness in Death Certification

- The death certificate must be completed before final disposition of the body; delay in completing and signing may interfere with funeral arrangements and in settling estates
- Significant implications in death benefits paid to families (for example, workers' compensation claims; double indemnity payments in cases of accidental death; FEMA burial benefits)
- The death certificate is the source of information for regional, state, and national mortality data, which in turn is used for funding and directing research and public health efforts

30. **PART C: ENTER THE CHAIN OF EVENTS (DISEASES, INJURIES, OR COMPLICATIONS) THAT DIRECTLY CAUSED THE DEATH. DO NOT ENTER TERMINAL EVENTS SUCH AS CARDIAC ARREST, RESPIRATORY ARREST, OR VENTRICULAR FIBRILLATION WITHOUT SHOWING THE ETIOLOGY. ENTER ONLY ONE CAUSE ON A LINE.**

**IMMEDIATE CAUSE**  
(Final disease or condition resulting in death). Sequentially list conditions, if any, leading to the cause listed on line a. Enter the **UNDERLYING CAUSE** (disease or injury that initiated the events resulting in death) **LAST**

Medical certification of death

Certificate registered with state by funeral home

CDC assigns ICD-10 codes  
(one underlying cause of death and up to 20 additional multiple causes of death)

Mortality data

# Jurisdiction: Who Should Complete and Sign the Death Certificate?

- In most **natural** deaths, a treating physician is responsible for the medical certification of death, including deaths which occur outside of health care facilities or in which the physician is not physically present
- The medical examiner may assume jurisdiction only under certain circumstances

# Jurisdiction: Who Should Complete and Sign the Death Certificate?

- Non-medical examiner cases will be signed by “the physician in charge of the patient’s care for the illness or condition that resulted in death...In the absence of the physician, the certificate may be completed and signed by another physician designated by the physician” (TCA 68-3-502)
- Certifier is immune from civil suit if completed in good faith; failure to do so may result in discipline of medical license

**The medical certification of death is to be completed within \_\_\_\_\_ of death**

**A.**30 days

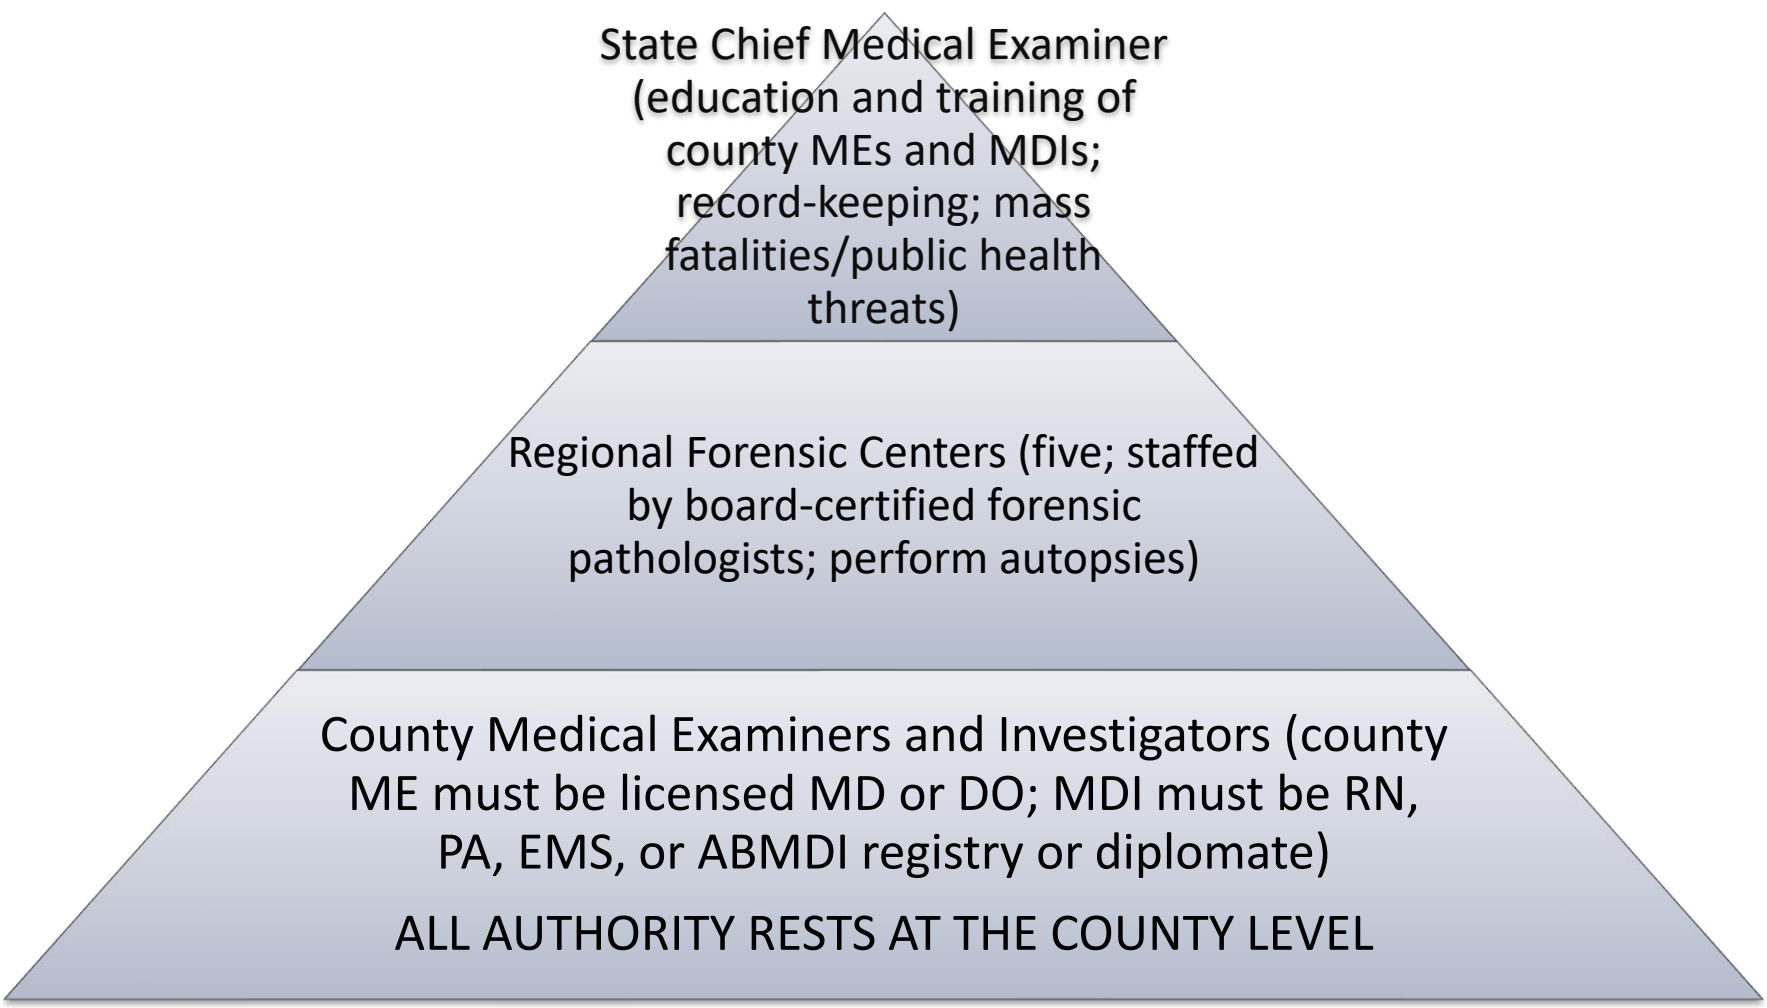

**C.** 48 hours

**B.**5 days

**C.**48 hours

**D.**96 hours

# Tennessee Medical Examiner System

State Chief Medical Examiner  
(education and training of  
county MEs and MDIs;  
record-keeping; mass  
fatalities/public health  
threats)

Regional Forensic Centers (five; staffed  
by board-certified forensic  
pathologists; perform autopsies)

County Medical Examiners and Investigators (county  
ME must be licensed MD or DO; MDI must be RN,  
PA, EMS, or ABMDI registry or diplomate)

**ALL AUTHORITY RESTS AT THE COUNTY LEVEL**

# Davidson and Williamson County Medical Examiner

- Forensic Medical Management Services
- (615) 743-1800

# Medical Examiner Certification of Death

- The county medical examiner for the county in which the death occurred should be notified in “any case involving a homicide, a suspected homicide, a suicide, or a violent, unnatural, or suspicious death” (TCA 38-7-106 and 38-7-108)
- Examples include:
  - Deaths due or related to acute overdose of legal or illegal drugs and/or alcohol
  - Deaths due to drowning
  - Deaths due to thermal or chemical burns, or smoke inhalation
  - Death by disease, injury, or toxicity resulting from employment
  - Deaths due to hypo- or hyperthermia
- In such cases, the county medical examiner “shall investigate and certify the death certificate” (TCA 68-3-502-d)
- Deaths of prisoners
- Sudden unexplained deaths in people with no known medical process(es) which could reasonably account for death

# Medical Examiner Certification of Death: Delayed Non-natural Deaths

- If any external force or entity is related in any way to death, the manner of death cannot be considered natural
- All non-natural deaths fall under medical examiner jurisdiction
  - Jurisdiction is based on the county in which death was pronounced
- **The interval of time elapsed between injury and death is irrelevant**
- Examples of delayed deaths include:
  - An elderly person who dies months after becoming bedridden after a fall;
  - A person who dies of pneumonia due to paraplegia resulting from a car accident years before;
  - A person who dies a week after an anoxic brain injury caused by choking on food

# Major Take-Home Points

- If any discrete, identifiable external force, object, or substance contributed *in any way* to death, the death cannot be considered natural and must be reported to the county medical examiner, regardless of the interval elapsed between the inciting event and death
- The BOTTOM LINE is THE BOTTOM LINE

# Physician (Non-ME) Certifiers

- One of the responsibilities of a primary care physician is to provide death certification for his or her patients who die of natural, diagnosed causes, even if the physician was not present at the time of death (TCA 68-3-502 (c)(1))
  - If the patient has not been seen by the physician in the four months leading up to death, the physician may still certify the death, or may refer case to the county medical examiner
- Other physicians knowledgeable with patient history may also certify deaths
  - Examples: cardiologist, oncologist, emergency room physician

# When and Where Death Occurs: Brain Death Equals Death

- T.C.A. 68-3-501 (Uniform Determination of Death Act): death occurs when either:
  - Irreversible cessation of cardiac and respiratory systems occurs; or
  - Irreversible cessation of function of entire brain occurs
- T.C.A. 68-3-502: when a body is discovered dead, the place, date, and time of death are when and where the body was found

# Has Death Even Occurred?

28. **PART I.** Enter the chain of events (diseases, injuries, or complications) that directly caused the death, respiratory arrest, or ventricular fibrillation without showing the etiology. Enter only one cause on a line.

IMMEDIATE CAUSE  
(Final disease or condition resulting in death). Sequentially list conditions, if any, leading to the cause listed on line a. Enter the **UNDERLYING CAUSE** (disease or injury that initiated the events resulting in death) **LAST**

## TENNESSEE VRISM

The purpose of the Tennessee VRISM system is to support the registration of Tennessee vital events for the Tennessee Department of Health and other users such as funeral directors, attending physicians, medical examiners and birthing facilities. This system may be used only for the purpose for which it is provided. Any attempt to file fraudulent certificates of live birth, death or reports of fetal death is punishable in accordance with Tennessee statutes.

By accessing this system, I agree to use this system only for the purpose of registering a Certificate of Live Birth, Certificate of Death or Report of Fetal Death for events occurring in the State of Tennessee.

I understand that failure to adhere to the above agreement will result in loss of access to the VRISM system. Any unauthorized access, misuse and/or disclosure of information may result in disciplinary action including, but not limited to, suspension or loss of individual or facility access privileges, an action for civil damages, or criminal charges.

# Part I: Cause of Death Statement

- Read from top to bottom: Cause A is due to Cause B is due to Cause C is due to Cause D
- Can use only one line, or two, or three, or all four
- Last diagnosis listed will be coded as underlying cause of death, therefore:
- THE BOTTOM LINE IS THE BOTTOM LINE

IMMEDIATE CAUSE (Final disease or condition resulting in death)	
a.	<input type="text"/> <span>ABC ✓</span>
Due to (or as a consequence of)	
Sequentially list conditions, if any, leading to the cause listed on line a. Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.	
b.	<input type="text"/> <span>ABC ✓</span>
Due to (or as a consequence of)	
c.	<input type="text"/> <span>ABC ✓</span>
Due to (or as a consequence of)	
d.	<input type="text"/> <span>ABC ✓</span>

**IMMEDIATE CAUSE** (Final disease or condition resulting in death)

a.

Due to (or as a consequence of)

Sequentially list conditions, if any, leading to the cause listed on line a.

Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.

b.

# Cause of Death Statement

- Cause of death is defined as “the anatomic disease or injury that initiated the train of morbid events leading directly to death”
- The cause of death statement on the death certificate represents the *medical opinion* of the certifier
- *More likely than not*

I should be \_\_\_\_\_% certain that my diagnosis in the cause of death statement is correct

A. 75%

B. 99%

C. 100%

D. 51%

E. 33%

D. 51%

More likely than not

# “To the best of my knowledge...”

☒ **PHYSICIAN**-To the best of my knowledge, death occurred at the date, time, and place, and due to the cause(s) and manner stated.

☐ **MEDICAL EXAMINER**-On the basis of examination, and/or investigation, in my opinion, death occurred at the date, time, and place, and due to the cause(s) and manner stated.

- Tennessee code grants civil immunity to certifying physicians acting in good faith (TCA 68-3-513)
- HOWEVER: physicians who refuse to or consistently fail to comply with rules and laws regarding death certification are subject to disciplinary action on their medical licenses for “unprofessional, dishonorable, or unethical conduct” Rule 0880-02-.14(13); TCA 68-3-502 and 63-9-108

# Cause of Death Statement: Examples

- 56 year old with hypertension suffers a hemorrhagic stroke

IMMEDIATE CAUSE (Final disease or condition resulting in death)		APPROXIMATE INTERVAL: Onset to death
a.	HEMORRHAGIC CEREBROVASCULAR ACCIDENT Due to (or as a consequence of)	<input type="text"/>
<b>Sequentially list conditions, if any, leading to the cause listed on line a. Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.</b>		
b.	ESSENTIAL HYPERTENSION Due to (or as a consequence of)	<input type="text"/>
c.	<input type="text"/> Due to (or as a consequence of)	<input type="text"/>
d.	<input type="text"/>	<input type="text"/>

# Cause of Death Statement: Examples

- 43 year old receives a bone marrow transplant and develops *C. difficile* colitis

IMMEDIATE CAUSE (Final disease or condition resulting in death)		APPROXIMATE INTERVAL: Onset to death
a. CLOSTRIDIUM DIFFICILE COLITIS	ABC ✓	
Due to (or as a consequence of)		
Sequentially list conditions, if any, leading to the cause listed on line a. Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.		
b. IMMUNOSUPPRESSION	ABC ✓	
Due to (or as a consequence of)		
c. BONE MARROW TRANSPLANT	ABC ✓	
Due to (or as a consequence of)		
d. ACUTE MYELOGENOUS LEUKEMIA	ABC ✓	

# Cause of Death Statement: Examples

- It may not be possible to identify the precise physiologic sequence (mechanism) leading up to death
- In such cases, the known diagnosis which could reasonably account for death should be listed as the cause
- Example: patient in hospice with metastatic lung cancer

IMMEDIATE CAUSE (Final disease or condition resulting in death)		APPROXIMATE INTERVAL: Onset to death
a.	<input type="text" value="ADENOCARCINOMA OF LUNG WITH METASTASES TO BRAIN"/> 	<input type="text"/>
Due to (or as a consequence of)		
Sequentially list conditions, if any, leading to the cause listed on line a. Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.		
b.	<input type="text"/> 	<input type="text"/>
Due to (or as a consequence of)		
c.	<input type="text"/> 	<input type="text"/>
Due to (or as a consequence of)		
d.	<input type="text"/> 	<input type="text"/>

# Cause of Death Statement: Examples

- It is acceptable to use the terms “probable”, “possible”, or “suspected”
- Example: 86 year-old with 7 cm abdominal aortic aneurysm found dead at home with distended abdomen

IMMEDIATE CAUSE (Final disease or condition resulting in death)		APPROXIMATE INTERVAL: Onset to death
a.	<input type="text" value="PROBABLE RUPTURED AORTIC ANEURYSM"/> 	<input type="text"/>
Due to (or as a consequence of)		
<b>Sequentially list conditions, if any, leading to the cause listed on line a. Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.</b>		
b.	<input type="text" value="ATHEROSCLEROTIC CARDIOVASCULAR DISEASE"/> 	<input type="text"/>
Due to (or as a consequence of)		
c.	<input type="text"/> 	<input type="text"/>
Due to (or as a consequence of)		
d.	<input type="text"/> 	<input type="text"/>

# Cancer-Related Deaths: Do This

- Include:
  - Primary site
  - Cell type, if known
  - Site(s) of metastases, if applicable

IMMEDIATE CAUSE (Final disease or condition resulting in death)		APPROXIMATE INTERVAL: Onset to death
a.	<input type="text" value="OSTEOSARCOMA OF LEFT FEMUR, METASTATIC TO LUNGS"/> <small>ABC ✓</small>	<input type="text"/>
Due to (or as a consequence of)		
<b>Sequentially list conditions, if any, leading to the cause listed on line a. Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.</b>		
b.	<input type="text"/> <small>ABC ✓</small>	<input type="text"/>

# Not This

28. **PART I.** Enter the chain of events (diseases, injuries, or complications) that directly caused the death. DO NOT enter terminal events such as cardiac arrest, respiratory arrest, or ventricular fibrillation without showing the etiology. Enter only one cause on a line

IMMEDIATE CAUSE  
(Final disease or  
condition resulting in  
death). Sequentially  
list conditions, if any,  
leading to the cause  
listed on line a. Enter  
the **UNDERLYING  
CAUSE** (disease or  
injury that initiated the  
events resulting in  
death) **LAST**

a. ENCEPHALOPATHY

(OR A CONSEQUENCE OF)

b. BRAIN RESECTION

(OR A CONSEQUENCE OF)

c.

(OR A CONSEQUENCE OF)

d.

# “Complications of...”

**IMMEDIATE CAUSE** (Final disease or condition resulting in death)

a.

Due to (or as a consequence of)

Sequentially list conditions, if any, leading to the cause listed on line a.

Enter the **UNDERLYING CAUSE** (disease or injury that initiated the events resulting in death) **LAST**.

b.

Due to (or as a consequence of)

c.

Due to (or as a consequence of)

d.

# Aspiration Pneumonia

- Most cases of aspiration pneumonia occur in neurologically compromised patients
- The disease process causing the impairment should be listed as the underlying cause of death

IMMEDIATE CAUSE (Final disease or condition resulting in death)		APPROXIMATE INTERVAL: Onset to death
a.	ASPIRATION PNEUMONIA	
Due to (or as a consequence of)		
Sequentially list conditions, if any, leading to the cause listed on line a. Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.		
b.	DEMENTIA, NOT OTHERWISE SPECIFIED	
Due to (or as a consequence of)		
c.		
Due to (or as a consequence of)		
d.		

# Deaths in the Elderly

**IMMEDIATE CAUSE** (Final disease or condition resulting in death)

a. INANITION

Due to (or as a consequence of)

Sequentially list conditions, if any, leading to the cause listed on line a.

Enter the **UNDERLYING CAUSE** (disease or injury that initiated the events resulting in death) **LAST**.

b. MULTI-INFARCT DEMENTIA

Due to (or as a consequence of)

c. ATHEROSCLEROTIC CARDIOVASCULAR DISEASE

Due to (or as a consequence of)

d.

# Deaths due to “Old age”

- It is of little statistical value to list “senescence” or “old age” in the cause of death statement; the demographic information is captured in another part of the death certificate
- If an elderly person is found dead and they truly have no known medical diagnosis to account for death, the death may be certified as shown below (please use sparingly)

IMMEDIATE CAUSE (Final disease or condition resulting in death)

HOURS

Due to (or as a consequence of)

c. CORONARY ARTERY THROMBOSIS

HOURS

Due to (or as a consequence of)

d. ATHEROSCLEROTIC CARDIOVASCULAR DISEASE

YEARS

# Major Take-Home Points

- If any discrete, identifiable external force, object, or substance contributed *in any way* to death, the death cannot be considered natural and must be reported to the county medical examiner, regardless of the interval elapsed between the inciting event and death
- The BOTTOM LINE is THE BOTTOM LINE

# Part II: Contributory Causes of Death

## 28. PART II.

Enter other significant conditions contributing to death but not resulting in the underlying cause given in PART I.

Other Significant Conditions contributing to death

# Part II: Contributory Causes of Death

- Conditions which *contributed to* but did *not directly lead to* death
- May list more than one contributory cause of death
- 75 year-old with hypertension, diabetes, and chronic obstructive pulmonary disease found dead at home without antecedent complaints

IMMEDIATE CAUSE (Final disease or condition resulting in death)		APPROXIMATE INTERVAL: Onset to death
a.	<input type="text" value="HYPERTENSIVE CARDIOVASCULAR DISEASE"/> 	<input type="text"/>
Due to (or as a consequence of)		
Sequentially list conditions, if any, leading to the cause listed on line a. Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.		
b.	<input type="text"/> 	<input type="text"/>
Due to (or as a consequence of)		
c.	<input type="text"/> 	<input type="text"/>
Due to (or as a consequence of)		
d.	<input type="text"/> 	<input type="text"/>

28. PART II.

Enter other significant conditions contributing to death but not resulting in the underlying cause given in PART I.

Other Significant Conditions contributing to death

# Cause versus Mechanism of Death

28. **PART I.** Enter the chain of events (diseases, injuries, or complications) that directly caused the death. DO NOT enter terminal events such as cardiac arrest, respiratory arrest, or ventricular fibrillation without showing the etiology. Enter only one cause on a line.

- Recall that the *cause* of death is the *anatomic* disease or injury that initiated the train of events leading to death
- *Mechanisms* of death are non-specific *physiologic* processes

# Cause versus Mechanism of Death

- Mechanisms of death should not be listed as the sole or underlying cause of death
- Examples: exsanguination, respiratory arrest, arrhythmia, asphyxia, anoxic brain injury, metabolic acidosis, acute respiratory distress syndrome

# Non-specific Mechanisms of Death:

## Examples: More Information is Required

### Unlikely Underlying Cause

The condition you reported on the lowest box in Part I HYPERKALEMIA usually develops as a complication of another more specific condition.

**IMMEDIATE CAUSE** (Final disease or condition resulting in death)

**APPROXIMATE INTERVAL:**

Onset to death

a. LETHAL DYSRHYTHMIA

ABC

Due to (or as a consequence of)

Sequentially list conditions, if any, leading to the cause listed on line a.

Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.

b. VENTRICULAR FIBRILLATION

ABC

Due to (or as a consequence of)

c. HYPERKALEMIA

ABC

Due to (or as a consequence of)

Source: CDC, Physicians Handbook on Medical Certification of Death

# Manner of Death

30. Manner of Death

Manner of death

31. Tobacco Use

Did tobacco use contribute to death?

32. If Female

If female, select one from list

Natural  
Accident  
Suicide  
Homicide  
Pending Investigation  
Could not be determined

# Manners of Death: Natural

- If a discrete injury or poisoning event contributed *in any way* to death, *regardless of time elapsed between the event and death*, the manner of death cannot be considered to be natural
- All non-natural deaths are to be reported to the medical examiner of the county in which death occurred
- Only one manner of death may be selected
- **The non-medical examiner certifier of death is limited to “Natural” and “Pending” as choices for manner of death**

# Manners of Death: Pending

- “Pending” is reserved for those cases in which the cause and/or manner of death cannot be determined within the 48 hours after death, but further information or investigation is expected (e.g., autopsy results)
- The record must be amended in VRISM with the definitive cause and manner of death completed and certified within six months of the death

Main – Death  
Delayed Diagnosis

# Manners of Death: Non-Natural; Reserved for County Medical Examiner

- **Accident:** death due to injury or poisoning without intent to cause harm
- **Homicide:** death resulting from a volitional act by another person intended to cause fear, harm, or death
- **Suicide:** death resulting from injury or poisoning as a result of an intentional self-inflicted act committed to cause self-harm
- **Could not be determined:** either too much or too little information to determine manner of death to a reasonable degree of medical certainty; should not be used in the absence of an autopsy
- **The period of time elapsed between the injury and the death does not alter the manner of death**

# Manners of Death: Examples

- 83 year old falls at home; admitted to hospital for ORIF of left femur; hospital course complicated by pneumonia, MI, ARF; dies two months later with mucus plug of trach
  - Manner of death: accident; cause of death: complications of left femur fracture
  - Apply the “but-for” principle: “but-for” the fall, the above-listed complications would not have occurred; or
  - Ask, “Did the patient return to their pre-injury level of function?”
  - Time elapsed between injury and death is irrelevant to manner of death

# Manners of Death: Examples

- 53 year-old paraplegic dies of urosepsis
  - Paraplegia is due to ruptured spinal AVM: manner of death is natural
  - Paraplegia is due to injuries sustained in MVA ten years prior to death: manner of death is accident
  - Paraplegia is due to self-inflicted gunshot wound to chest three years prior to death: manner of death is suicide
  - Paraplegia is due to gunshot wound to spine after decedent discovered *in flagrante delicto* with a spouse not his own thirty years ago: manner of death is homicide

28. **PART I.** Enter the chain of events (diseases, injuries, or complications) that directly caused the death. DO NOT enter terminal events such as cardiac arrest, respiratory arrest, or ventricular fibrillation without showing the etiology. Enter only one cause on a line.

**IMMEDIATE CAUSE**

# Vital Statistics Reporting Guidance

Report No. 3 • April 2020

## **Guidance for Certifying Deaths Due to Coronavirus Disease 2019 (COVID–19)**

# Deaths Caused by or Related to COVID-19

- “COVID-19”, “SARS-CoV-2”, or “novel coronavirus 19” should be included in Part I of the death certificate if death was felt to be due to novel coronavirus infection
- If a person with chronic severe medical conditions dies with novel coronavirus-19 infection and it is felt that the infection hastened their demise, the death should be attributed to COVID-19
  - Any pre-existing conditions which may have made the decedent more susceptible to death due to novel coronavirus-19 infection should be listed in Part II

# Deaths Caused by or Related to COVID-19: Why Should the Infection Be Listed as the Underlying Cause of Death?

- Apply the “but-for” principle: But for the infection, death would not have occurred when it did
- Analogous to a person in hospice care with metastatic carcinoma of the lung who develops a perforated duodenal ulcer
  - Although they were expected to die of lung cancer, the perforated duodenal ulcer intervened and is therefore the underlying cause of death
  - But for the duodenal ulcer, death would not have occurred when it did

<p>28. <b>PART I.</b> Enter the <u>chain of events</u> (diseases, injuries, or complications) that directly caused the death. DO NOT enter terminal events such as cardiac arrest, respiratory arrest, or ventricular fibrillation without showing the etiology. Enter only one cause on a line.</p>		<p>Approximate interval: Onset to death</p>
<p>IMMEDIATE CAUSE (Final disease or condition resulting in death)</p> <p>Sequentially list conditions, if any, leading to the cause listed on line a. Enter the <b>UNDERLYING CAUSE</b> (disease or injury that initiated the events resulting in death) <b>LAST</b></p>	<p>a. <b>PERFORATED DUODENAL ULCER</b></p> <p>Due to (or as a consequence of)</p> <p>b. _____</p> <p>Due to (or as a consequence of):</p> <p>c. _____</p> <p>Due to (or as a consequence of):</p> <p>d. _____</p>	<p>_____</p> <p>_____</p> <p>_____</p> <p>_____</p>
<p><b>PART II.</b> <u>Other significant conditions contributing to death</u> but not resulting in the underlying cause given in PART I.</p> <p><b>ADENOCARCINOMA OF LEFT LUNG, METASTATIC TO BRAIN</b></p>		<p>29a. <b>WAS AN AUTOPSY PERFORMED?</b> <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No</p> <p>29b. <b>WERE AUTOPSY FINDINGS AVAILABLE TO COMPLETE THE CAUSE OF DEATH?</b> <input type="checkbox"/> Yes <input type="checkbox"/> No</p>

# Deaths Caused by or Related to COVID-19

- “Presumed”, “likely”, “probable” or “suspected” may be used in cases in which testing was not performed or was negative, but there is a strong clinical suspicion that death was due to novel coronavirus infection
- There are many *Coronaviridae* species; the death certificate must indicate that death was due to infection with SARS-CoV-2 or novel coronavirus-19 or to the disease COVID-19 for the correct ICD code to be assigned
  - Please don't just write “coronavirus” on the death certificate

# COVID-19 Language Goes Here

<b>CERTIFIER</b>  PHYSICIAN OR MEDICAL EXAMINER EXECUTING CAUSE OF DEATH MUST COMPLETE AND SIGN WITHIN 48 HOURS.	26. <b>CERTIFIER</b> (Check only one): 26a. <input type="checkbox"/> <b>PHYSICIAN</b> - To the best of my knowledge, death occurred at the date and place, and due to the cause(s) and manner stated. 26b. <input type="checkbox"/> <b>MEDICAL EXAMINER</b> - On the basis of examination, and/or investigation, in my opinion, death occurred at the date, and place, and due to the cause(s) and manner stated.

## SCENARIOS

**An 80 year-old man was seen by a nurse practitioner two months ago for routine follow-up of his hypertension, diabetes mellitus, and chronic obstructive pulmonary disease. He was found dead at home without any signs of trauma, foul play, or drug overdose. Who should sign the death certificate?**

- A.** The nurse practitioner.
- B.** The county medical examiner, as the death was unwitnessed.
- C.** The county medical examiner, because the cause of death cannot be determined to a reasonable degree of medical certainty.
- D.** The physician supervising the nurse practitioner.

# Answer: D.

The physician supervising any health care extender providing the patient's care for the illness which results in death should sign the death certificate.

In this case, the cause of death in Part I could be listed as "hypertensive cardiovascular disease", with diabetes mellitus and chronic obstructive pulmonary disease listed in Part II as other significant conditions.

IMMEDIATE CAUSE (Final disease or condition resulting in death)		APPROXIMATE INTERVAL: Onset to death
a.	<input type="text" value="HYPERTENSIVE CARDIOVASCULAR DISEASE"/> 	<input type="text"/>
Due to (or as a consequence of)		
Sequentially list conditions, if any, leading to the cause listed on line a. Enter the UNDERLYING CAUSE (disease or injury that initiated the events resulting in death) LAST.		
b.	<input type="text"/> 	<input type="text"/>
Due to (or as a consequence of)		
c.	<input type="text"/> 	<input type="text"/>
Due to (or as a consequence of)		
d.	<input type="text"/> 	<input type="text"/>
28. PART II.		
Enter other <u>significant conditions contributing to death</u> but not resulting in the underlying cause given in PART I.		
Other Significant Conditions contributing to death		
<input type="text" value="DIABETES MELLITUS; CHRONIC OBSTRUCTIVE PULMONARY DISEASE"/> 		

**An elderly person complained of left-sided chest pain and tightness shortly before collapsing. She was transported to the emergency department, where she was pronounced dead. Her family relates a history of multiple myocardial infarctions and high cholesterol. Who should sign the death certificate?**

- A.** The patient's primary care doctor.
- B.** The emergency room physician.
- C.** The patient's cardiologist.
- D.** Any of the above.

## **Answer: D.**

The emergency room doctor, the patient's regular physician, or another physician who has treated the patient for the illness causing death (for example, a cardiologist) may sign the death certificate.

If none of these does so, the chief medical officer of the institution in which death is pronounced is to sign the death certificate (TCA 68-3-502).

**I am a primary care physician in a small rural community. One of my long-time patients, an elderly man with multiple medical problems, has been found dead at home. I have not seen the patient in eight months. Who will sign the death certificate?**

- A.** The primary care doctor, even though it has been more than four months since the patient was last seen.
- B.** The county medical examiner, as the patient had not been seen by the primary care doctor within four months.
- C.** Either A or B may sign.

## Answer: C.

The primary care physician, as the person most familiar with the decedent's medical history, is the most appropriate person to complete the death certificate. A physician treating a patient for the disease process accounting for death is obligated by statute to complete and sign the death certificate if the patient has been seen within the four months prior to death.

However, if the treating physician has not seen the patient in the four months before death, and the death occurs outside of a health care facility, the case may be referred to the county medical examiner in the county in which death occurred. The county medical examiner may then review medical records and issue the death certificate.
