Research Experience:

- 2011-13 University of Toronto – St. Michael's Hospital
 Title of project: **'Breast cancer: racial differences in age of onset. A potential confounder in Canadian screening recommendations'**
 Department: General Surgery
 Supervisor: Dr. Ralph George

This retrospective study examined the racial differences in the onset of breast cancer in a Canadian urban setting. Current Canadian screening guidelines for breast cancer have been based on study populations mostly from North America or Europe. Certain non-Caucasian regions are reporting increasing rates of breast cancer, with earlier ages of diagnosis.

- 2005 McGill University – Montreal General Hospital
 Title of project: **'Validation of the Two Minute Walk Test (2MWT) as an objective measure of in-hospital postoperative recovery'**
 Department: General Surgery
 Supervisor: Dr. Liane Feldman, Dr. Gerald Fried, Dr. Ali Taqi

The project involved assessing a measure of functional exercise capacity, the Two-minute Walk Test, as a possible measure of postoperative recovery (evaluated in patients undergoing elective colorectal resection).

- 2005 McGill University – Montreal General Hospital
 Title of project: **'Laparoscopic versus Open Appendectomy: Outcomes and Attitudes'**
 Department: General Surgery
 Supervisor: Dr. Liane Feldman, Dr. Gerald Fried, Dr. Ali Taqi

The project involved determining whether laparoscopy possesses benefits over the conventional open appendectomy (OA) surgical approach in patients and to discover possible reasons for the increased preference for open surgeries at McGill (MUHC surgeons, compared to other Quebec university hospitals, perform 50% fewer laparoscopic appendectomies).

- 2003 Aegera Therapeutics Inc. (Biotechnology Company)
 Title of project: **'Small Molecule JNK Pathway Inhibitor'**
 Department: Molecular Biology
 Supervisor: Kim Hewitt, PhD

This project involved research into one specific drug candidate molecule that showed potentially neuroprotective effects, through inhibition of the JNK (c-Jun N-terminal kinase) pathway neuronal apoptosis. This drug candidate was specifically tested on peripheral neuropathy resulting from complications of the use of chemotherapy in cancer treatment and from disease states including diabetes. My role included analysis of gait disturbances in animal models of peripheral neuropathy and comparison with those post-treatment. Currently a related further optimized compound has undergone regulatory preclinical toxicology testing and began clinical testing in early 2008.
