

Tecsys Barcode Reference Guide

Use this document as a reference to determine the appropriate barcode to scan while logging items within the Tecsys POU system.

GTIN Barcode

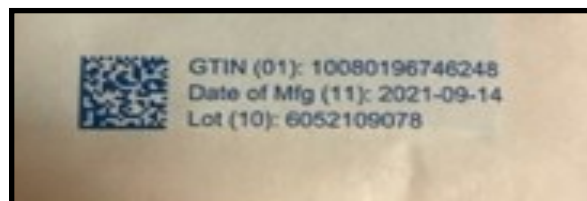

- All GTIN Barcodes begin with **(01)** as highlighted below.
- Stands for **Global Trade Item Number**.
- Includes product ID/manufacture reference number, and Unique Device Identifier (UDI) data including expiry date, lot, and serial number.

1. Product ID
2. Secondary Data

2D Barcode or QR Code

- A single 2D barcode can hold a significant amount of information and may remain legible even when printed at a small size or etched onto a product.
- May include UDI information along with GTIN.

Tracking ID Barcode

- Each scan updates the Tissue Tracking Log
- Populates details of the item in CDU
 - Additional Tissue implantation documentation may be required
- No other barcode on package needs to be scanned in CDU.
