

HeartCode Complete Renewal Courses

American Heart Association's HeartCode Complete blended learning program allows learners to fully complete their BLS, ACLS, and PALS renewal training at their own pace and without attending a classroom-based course. First, learners complete online modules such as videos, assessment activities, and knowledge checks. Next, skills testing is completed at a manikin cart. The HeartCode Complete manikin carts provide real-time audio and visual feedback during the skills testing. After completing all portions of the course, learners receive an AHA eCard valid for two years.
