

ART CASE CONFERENCE GUIDELINES For CLINICAL CONSULTATION

The purpose of this form is to get an accurate chronological history of antiretroviral medications and response by considering concurrent virologic and immunologic data.

Do not use patients' name. An identifier of your choice will be sufficient. Data regarding race, gender, and age are collected for record keeping purposes only

Start from earliest/initial regimen to current regimen

Include any periods when patient is off all antiretrovirals

The CD4 % is important, as is the absolute CD4 value (ex. 400/20%)

The two far-right blank columns can be used to track variables such as liver function, lactate, lipids, etc.

Copies of any genotype or phenotype tests should be included with patient summary form

Pre-treatment lab values are also helpful, i.e. CD4 nadir & viral load prior to ART therapy

Please indicate your patient's level of adherence and how this was determined, i.e. provider opinion, medication pick-up, patient report, etc.

Unk = Unknown

1 = Poor = <70% of doses

2 = Fair = 70-90% (similar failure rates for 70-80% and 80-90%)

3 = Good = 90-95%

4 = Excellent = 95%
