Creating a Value-Based Health Care Delivery System

This is a collaborative study between Massachusett’s Eye and Ear, Seattle Children’s, CU Denver, and Vanderbilt Children’s to standardize aerodigestive patient procedures in order to achieve consistently excellent outcomes at a lower cost.

- **Aim 1**: Eliminate process steps and variations that do not contribute to improved patient outcomes
- **Aim 2**: Redesign processes to reduce waste and idle time
- **Aim 3**: Optimize processes and interventions over a complete cycle of care
- **Aim 4**: Reduce unused capacity of people, equipment, and facilities
