Pediatric Endoscopic Ear Surgery

The purpose of this retrospective study is to determine if endoscopic ear surgery is a feasible standard of care with relation to the general population as well as subsets of patients (Down's syndrome, craniofacial anomalies, etc.)

- **Aim 1**: To evaluate outcomes of pediatric patients who have undergone endoscopic ear surgery at Vanderbilt University

- **Aim 2**: Gather data to review for statistical significance with regard to the success rates as well as audiological outcomes when compared with standard microscope technique
