

Creating a Value-Based Health Care Delivery System

This is a collaborative study between Massachusetts's Eye and Ear, Seattle Children's, CU Denver, and Vanderbilt Children's to standardize aerodigestive patient procedures in order to achieve consistently excellent outcomes at a lower cost.

- o **Aim 1:** Eliminate process steps and variations that do not contribute to improved patient outcomes
- o **Aim 2:** Redesign processes to reduce waste and idle time
- o **Aim 3:** Optimize processes and interventions over a complete cycle of care
- o **Aim 4:** Reduce unused capacity of people, equipment, and facilities
