

Evaluating Predictors of Clinical Outcomes in Pediatric Patients with Cystic Fibrosis

This study will help us to better understand the challenges and successes of management and treatment of pediatric patients with cystic fibrosis at our institution. Identifying and evaluating potential predictors of outcomes including nutritional status and presence of severe sinus disease will

- o **Aim 1:** Assess clinical factors to determine predictors of outcomes among pediatric patients with cystic fibrosis
- o **Aim 2:** Evaluate differences in nutritional status among children that require surgical intervention for sinus disease and children that do not require surgical intervention
- o **Aim 3:** Evaluate the impact of surgical treatment for sinus disease on nutritional outcomes
