Rehab Guidelines

First Time Dislocators: May be immobilized for 4-6 weeks before starting physical therapy.
Recurrent Dislocators: Physical therapy can begin immediately

Phase I: 0-4 weeks (typically)
Goals:
Re-establish full motion
Retard muscular atrophy
Decrease pain and inflammation
Allow capsular healing

- AAROM with wand to tolerance
- Begin IR/ER at side, progress to 30 degrees, 60 degrees then 90 degrees AB as pain subsides
- Submax isometrics for all shoulder musculature
- Gentle joint mobs & PROM
- Modalities PRN (ice, IFC-Estim etc . . .) to decrease inflammation and pain

Phase II: 4-8 weeks
Goals:
Increase dynamic stability
Increase strength
Maintain full motion

- Isotonic Strengthening
  Rotator Cuff
  Scapular Stabilizers
Deltoid, Biceps, Triceps
- Rhythmic Stabilization
  Basic
  Intermediate
  Advanced

**Phase III: 8-12**

*Goals:*
Increase neuromuscular control (especially in apprehension position)
Progress dynamic stability
Increase overall strength

- Continue to progress previous isotonic exercises
- Begin dynamic stabilization
  Basic
  Intermediate
  Advanced
- Introduce basic plyometrics
- *In Athletes begin to work ER/IR in 90 degrees AB

**Phase IV: Return to Activity**

*Goals:*
Progressively increase activities to patient for full functional return

- Continue previous isotonic strengthening program
- Advance plyometrics
- Instruct in maintenance program prior to discharge
