

Departments of Trauma and Neurological/O-Spine Surgery

Purpose:

Neurotrauma care must be continuously available for all TBI and spinal cord injury patients and must be present and respond within *30 minutes* based on institutional-specific criteria (ACS CD 8–2).

Background:

The intent is that neurosurgical care is promptly available for the acute care of the brain injured and spinal cord injured patient to include an in-person evaluation within 30 minutes. The time should start when the request is made to the neurosurgeon (time of page or call). The specific types of patients or clinical scenarios should be developed by each institution and agreed.

Criteria for immediate (30 min or less) response:

TBI

- Evidence of increased intracranial pressure as evidenced by: GCS≤8 AND anisocoria OR Head CT with signs of impending or active herniation
- Acute EDH, SDH

SCI

- Progressive neurologic deficit
- CT signs of cord impingement

Responding team:

A neurosurgery resident or orthopaedic resident of any level may act as a temporary consultant as long as there is communication and documentation with the neurosurgery or spine attending surgeon.

Approved By:

Oscar Guillamondegui, MD, FACS Trauma Medical Director

Reid Thompson, MD Chairman of Neurological Surgery Brad Dennis, MD Trauma PI Director

Melissa Smith, MSN, RN Trauma Program Manager

Clint Devin, MD Orthopaedic Spine Director
