Skills Assessment

The goal of the orientation shift is to:

- Review unique needs of patient population on the unit.
- Identify how to access commonly used equipment and supplies on the unit.
- Review the skills within the scope of practice of an Instructor.
- Access resources that support patient care (such as Mosby Nursing Skills, Krames Patient Education, Nursing website Policy page, Micromedex, LexiComp).

Scope of Practice

VTHH provides an opportunity for clinical rotations during a credited course through nursing schools. Clinical Instructors and Preceptors should give feedback regarding the student's progress and review all nursing tasks during the shift.

Scope of Practice:	Outside Scope of Practice:
Students should be given as many opportunities as possible within their scope of practice. During the rotational experience, students must be accompanied by the Clinical Instructor or Preceptor when they are completing any new skill or one which requires a nursing license.	Due to the need for additional training, certification, and/or nursing licensure the following items are outside the student nurse's Scope of Practice; therefore the student should not:
- Activities of Daily Living - Administer Medications-Excluding IV push (under the direct supervision of a Clinical Instructor or Preceptor) - Documentation (limited to their access and co-signed by the Clinical Instructor or preceptor) - Identify evidence-based interventions to prevent hospital-acquired infections and conditions with Clinical Instructor and Patients' Primary Staff Nurse - Foley Catheter (Insertion, Care, Removal) - Intake and Output - Phlebotomy - Prime IV fluids - Skin Care - NG tube insertion - Suctioning - Vital Signs	- Administer or Cosign blood and/or blood products - Administer IV push medications - Remove medications from the Omnicell system - Cosign narcotic tracking sheets or controlled drug records - Perform Point of Care Testing - Obtain or witness consent for surgery, procedures, etc. - Independently administer medications of any type - Complete independent assessments - Change infusion pump settings, titrate drips or manage IVs and infusion pumps without direct supervision. - Be responsible and accountable for Braden skin assessments, Medication reconciliation, Falls Risk assessments, or Admission history

Computer Skills Checklist

Getting to Know eStar

☐ Sign in window

- Select the department and patients you will be caring for

☐ Navigating the patient list reports

- Located below the patient list panel

- Quickly see an overview of the patient

without opening the chart

☐ Opening the patient chart

- Upon opening a patient's chart, you will be taken to summary 'activity'

- An 'activity' is a feature in eStar that supports a specific task

(i.e. Flowsheets 'activity', Chart Review 'activity' etc.)

☐ Documenting in Flowsheets

- Located below the MAR 'activity'

- Documenting vital signs, I/Os, and ADLs

- Correcting a flowsheet error

☐ Cosigning

- Located in the Summary 'activity'

- A clipboard icon with a check mark on it will appear in the patient

list panel, next to your patient's name, to alert you to cosign

☐ Documenting patient education

- Located in the Education 'activity'

☐ Documenting LDAs and charges

- Located in the Flowsheet 'activity'

- Adding LDAs

- Removing LDAs

☐ Administering Medications

- Located in the MAR 'activity'

- Administering IV medications

- Handling overdue and missed medications

- Communicating with pharmacy

☐ Documenting LDAs and charges

- Located in the Flowsheet 'activity'

- Adding LDAs

- Removing LDAs

☐ Other tips and tricks

- Admitting a patient

- Discharging a patient

- Viewing active orders

- Scanning Breastmilk (4E or 4N patients)

- Completing task and collecting labs
