This study aimed to develop and assess the performance of fine-tuned large language models for generating responses to patient messages sent via an electronic health record patient portal.

\textbf{OBJECTIVE}

This work was supported by NIH grants: R00LM014097-01, R01AG062499-01, and R01LM013995-01. Please contact the corresponding author at siru.liu@vumc.org

\textbf{CONCLUSION}

Leveraging large language models to generate responses to patient messages demonstrates significant potential in facilitating communication between patients and primary care providers.
