

## **Vanderbilt University Medical Center**

### **Physician Builder Agreement**

Last revised: July 18, 2020

VUMC engages end users in the build and local administration of Epic in order to leverage local expertise and improve satisfaction. The combination of clinical understanding (what a provider wants the system to do) and the technical understanding (what the system is capable of doing) has led to innovation and more efficient end users.

VUMC's Physician Builder program gives advanced training to physicians and other providers with a desire to learn how to make improvements to the system. These courses are offered through Epic Systems Corp. They describe the configuration of the system, opportunities for optimization, including the discussion of guardrails for potential unintended consequences of changes to each build item.

On achieving the Physician Builder Certification VUMC will grant you appropriate security to make meaningful contributions to the configuration of the system, within the bounds of VUMC's Physician Builder Policy. While you are expected to provide support for your contributions, you are not the owner of your work, as these contributions will become part of the system, and may be used by other teams or analysts in supporting future build work. VUMC reserves the right to rescind your Physician Builder privileges for violations of this policy or in other exceptional situations.

I, \_\_\_\_\_, agree to abide by the rules governing the VUMC Physician Builder Program.
