

A postdoctoral scholar position is available to work on projects aimed at studying the human B cell response to viruses. We investigate the genetic, molecular and structural basis for protection by human monoclonal antibodies. Preferred candidates will be an NIH training grant eligible Ph.D., M.D., or both with a relevant background. Successful candidates will benefit from a robust and busy environment for scientific research, growth and career development. Salary for this position will be commensurate with experience, expertise and Vanderbilt University Medical Center guidelines. Please send your cover letter, CV and a list of two references to: James Crowe, M.D. (E-mail: [james.crowe@vumc.org](mailto:james.crowe@vumc.org)). Professor and Director, Vanderbilt Vaccine Center.
